

Exercise

Friday

JavaScript (/javascript) / Ember JS (/javascript/ember-js) / Ember Independent Project

Text

## Project

### Question and Answer Message Board

Create a question and answer message board where a user submits a question and other users can respond with answers.

- Questions should have the content of the question itself, an author and additional notes.
- Answers should have the content of the answer and the author.
- Include a header and/or navbar that appears on all pages containing the name of your site and a link to the home page.
- List all questions on the homepage, with only the question and the name of the author showing.
- Users should be able to click on a question to view additional information.
- Allow users to add and edit questions.
- Allow users to add answers to a question. Answers should be added and viewed on the same page as the question they respond to.

### Further Exploration

If you have completed the objectives for the code review, consider adding some additional features:

- Add custom styling.
- Implement upvote/downvote functionality so that users may vote on answers.
- Add tags to questions.

## Objectives

Your code will be reviewed for the following objectives:

- Application template contains header with link(s).
- Data is stored in and retrieved from Ember Data models and Firebase.
- Components are used to create display and behavior for your templates.
- One-to-many relationship exists between Question and Answers.
- Application works as expected.
- Project is in a presentable, portfolio-quality state.
- Project demonstrates understanding of week's concepts. If prompted, you are able to discuss your code with an instructor using correct terminology.

## Submission

Submit your code for review to the **Ember JS** code review on Epicenter (<https://epicenter.epicodus.com/>) by 5:00pm on Friday.

Visit Independent Projects and Code Reviews (<https://www.learnhowtoprogram.com/javascript/getting-started-at-epicodus-ab97e368-2eca-4ea5-8f31-ee9321c86630/independent-projects-and-code-reviews>) for details on how to submit, how feedback works and course completion requirements.
